

Communication Driven Model

The Communication Driven Model exists naturally in the process of executing an application. In order to execute an application, the people in that application must communicate. In the communication driven model, the people communicate together to execute the application, where the people in that application are viewed as a separate entity, their communications are viewed as another separate entity, and the actual application is viewed as a separate entity as well.

The communication of the people project is being viewed as a separate entity from the people themselves. In this case we have

In order for the application to execute, the people in that application communicate to execute that application. In this case, we separate the execution of that application or the actual application, the people in the application, and the communication of the people, where we have

The way to look at it, people communicate in the project, the communication of the people drives the application, where the application is executed by the communication that drives it.
