SLPSoft Project Management Software Version 2012

SLPSoft, a company based in Tucson, Arizona, has announced the release of version 2012 of the following software: Interactive Application Modeling, Interactive Project Modeling, and Interactive Project Manager.   These new project management tools are to be used to help employees and managers manage and model their projects and their applications.   The new version of the software enables projects to be modeled in both the communication domain and the theory domain.

The Interactive Application Modeling Version 2012 provides the ability for users to model an application or project without worrying about the properties of the entities that make up that project.   Users can model applications in both communication and theory domains.   This product is very useful for users who want to produce a quick model of an application without the needs of the properties of the entities that make up that project. This software is now available for users to try it for a limited time.

The Interactive Project Modeling Version 2012 is for users who want to model a project or application in both communication and theory domains, where the properties of the entities that make up that project are needed.   In the Interactive Project Modeling Version 2012, the entities that make up a project are visible to users and the properties of those entities and also their functions as well.   This program is very useful for users who want to follow a model and execute an application or project from the model. There is a wide selection of project management tools on the internet, but only few really help with project modeling. This software is also available for a risk-free trial.

The Integrative Project Manger Version 2012 is geared toward project managers where a model is being viewed as a starting point for a project.   The project is managed from the model, where every employee in the project is visible in the model.   While the Interactive Application Modeling Version 2012 and the Interactive Project Modeling Version 2012 are being viewed as standalone application, the Interactive Project Manger Version 2012 enables employees to work in group, where each employee has access to the model from his/her own computer and all the employees are also active in the model. Project managers will appreciate the features from this project management software, which is not to help them achieve more from their projects.   In the Interactive Project Manager 2012, the managing of the project can be viewed in both the communication domain and the theory domain.   A free trial download is available if you visit our website now at www.slpsoft.com.

Installation Requirement for the products
• Windows 7, Windows Vista, Windows XP, Windows Server and .Net 4.0
• 120Meg of hard disk to install and more to hold project files
• Minimum processor speed 1 GHz
• Minimum RAM 512Mb

About SLPSoft
SLPSoft provides products and services to help managers, educators and other professionals who manage businesses efficiently and their employees.   When working in a project, it is always good for everybody in that project to have a good view of that project in their minds; including the managers and the employees who work in that project.   SLPSoft's products and services enable project managers and employees to have a good view of a project before executing the project and after executing it.   We are not just about releasing project management software, but we also provide services and training to

help you gain more out of these products.

Our passion lies with finding new innovative solutions for our users and we will never change. You may have been bombarded with other project management software in the market, but our products are about so much more than a quick solution.   Feel free to visit the website and try our products risk-free before you buy it.   If you like what you see then you can take pride in owning one of our helpful software, which will help you with all your projects.

P.S: You can also find us and see our reviews on CNet.com and Softpedia.com, just to name a few. We are new, but we are slowly making our mark. We are already working diligently to improve our products and finding new innovative ideas for future versions.   Stay tuned and see us grow!
